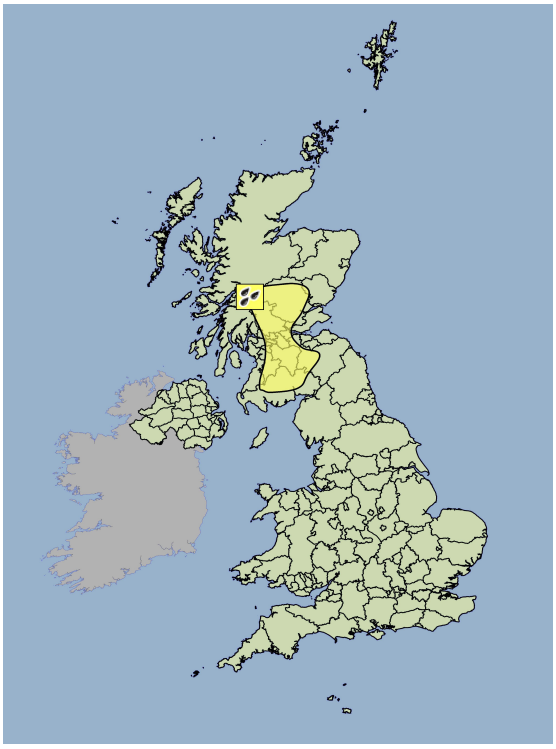
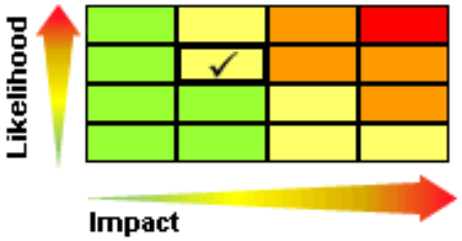
National Severe Weather Warning Service





Chief Forecasters Assessment
A developing Atlantic low pressure system is expected to move northeastwards just to the west of Scotland on Friday. This will push further bands of locally heavy rain across the area with more than 20 mm quite widely. Given existing levels of saturation, this is likely to lead to some flooding.

The Met Office have issued a **Yellow Alert** of **Rain**

Valid from **00:05 on Fri, 03rd Jan 2014** until **23:55 on Fri, 03rd Jan 2014**

Another spell of unsettled weather is expected on Friday with further wet and windy conditions likely across Scotland. The public should be aware of the risk of localised watercourse or surface water flooding.
